

## **The Impact of Social Media on Student Learning and Behaviour**

Renu Bala, Assistant Professor, Teaching of Life Science, National College of Education, Sirsa

### **Abstract**

In today's interconnected world, social media has become a vital part of everyone's life, especially students. Its use is expanding far more than it has in the past, particularly in the post-pandemic era when educational systems are undergoing considerable upheaval. Social media makes it easier to obtain accurate and up-to-date information. It deeply shapes the experiences and interactions of students. The impact of social networks on education is like a double sword, offering both advantages and disadvantages. On the one hand, it enhances learning by providing students with access to vast educational resources, connecting with classmates and teachers around the world, and encouraging collaboration on projects and online discussions. Nevertheless, it also presents issues such as potential distractions, mental health issues, and time management. The present paper is an attempt to discuss the impact of social media on students' learning and behaviour.

**Key terms:** educational systems, experiences, time management

### **Introduction**

Social media plays a decisive role in our daily lives, forming the way we communicate, learn and interact with our environment. Social media has an enormous impact on education because it gives students access to useful information, facilitates communication, and teaches them digital skills. The term "social media" describes internet platforms that enable users to produce, share, and engage with content. X (previously Twitter), Facebook, Instagram, TikTok, LinkedIn, and YouTube are all well-known social networking sites. The way individuals interact with society, communicate, and obtain information has been completely changed by these platforms. According to recent studies on social media use, almost 3 billion people use social media for communication globally. As statistics reveal that people spend an average of two hours a day on various social media applications, exchanging pictures and messages, updating their status, tweeting, liking, and commenting on numerous updated socially shared items, the growing number of social media users is spending an increasing amount of time on social network groups. Social media significantly influences the lives of students. Various social media platforms and dedicated online learning communities can serve as valuable tools to inspire students and deepen their understanding of a wide range of subjects. In general, social network knowledge is an integral part of effective and responsible use in education. Even if social media has both positive and negative impacts on students' learning and behaviour.

### **Positive Impact of Social Media on Students' Learning and Behaviour**

**Up-to-date Knowledge:** Social media allows students to keep in touch with updated current events and global problems. After educational press agencies and managers, thoughts can cause curiosity about the world and various cultures, which will make a more complete student. Thus, social media has become a valuable asset in educational travel. It transforms the passive activity training of students into an interactive and engaging experience.

**Digital literacy:** Social networks teach students digital literacy skills, for example, how to navigate online platforms, evaluate sources, and communicate effectively. These skills are essential for their future careers and overall digital competence. Additionally, acquaintances with social networks will develop the digital skills students need to prepare for future academic and professional efforts and succeed in an increasingly interconnected world.

**Improved Connectivity and Communication:** Social media facilitates immediate connection between people all over the world. It supports the upkeep of relationships across geographic boundaries.

**Education and Information Access:** Social media offers a variety of online courses, tutorials, and instructional materials. It also assists professionals and students in keeping up with current events.

**Availability of Educational Materials:** Students can access a variety of educational resources

through social media, such as study groups, online tutorials, and courses. Students can expand their knowledge outside the traditional classroom with the use of platforms such as YouTube, LinkedIn Learning, and educational forums.

**Group Education:** Social networking platforms allow students to work together on assignments, exchange notes, and have conversations as a group. Group communication and study are made easier by apps like WhatsApp, Microsoft Teams, and Google Classroom.

**Participation in Academic Activities:** Using gamified content, educational films, and quizzes, social media can enhance the interactive nature of learning. These platforms are utilised by students to produce captivating information that simplifies difficult subjects.

**Professional Connections and Career Opportunities:** In order to prepare for future employment, students can interact with industry experts, look into internships, and receive career advice through professional networking sites.

**Development of Skills:** Social media improves communication, problem-solving, and computer literacy. It also promotes originality through the production of content on websites such as YouTube and TikTok. It Aids students in gaining entrepreneurial skills through freelancing and internet marketing.

**Counselling and Support for Mental Health:** Social media offers counselling services and online support groups for students with anxiety and stress. It provides encouraging content and resources for mental health awareness. It also links students with experts who can provide them with emotional and academic support.

**Social Consciousness and Action:** Social, political, and environmental issues are made more widely known through social platforms. It permits support and fundraising for a range of organisations.

**Amusement and Originality:** To foster creativity, students exchange videos, music, and artwork. It offers live streaming, short films, and memes as forms of entertainment.

### **Negative Impact of Social Media on Students' Learning and Behaviour**

**Distraction and Addiction:** Overuse of these social media platforms can result in a waste of time and lower production. Many students have trouble in concentrating on their academics. Research shows that excessive use of social networks can lead to poor performance. Students who take too long on these platforms will try their best to complete tasks on time and will find it difficult to succeed in school. Social media distractions lead to reduced study time and lower grades. Students often prioritize entertainment over educational content.

**Issues with Mental Health:** Low self-esteem, anxiety, and despair can result from being exposed to unrealistic depictions of life. Online abuse and cyberbullying have a detrimental effect on the mental health of students.

**Disinformation and Academic Integrity:** Social network platforms are often filled with misinformation, rumors, and false information, which can undermine the students' ability to distinguish between reliable sources and critically evaluate information. Misconceptions are caused by the rapid dissemination of false information. Unverified news is frequently believed and spread, which can lead to fear or confusion. Exposure to inaccurate or biased content can distort students' understanding of academic subjects and lead to misunderstandings and errors in reasoning. Furthermore, the ease of copying and pasting information from social media sources without appropriate attribution can contribute to plagiarism and ethical dilemmas in academic settings, undermining student academic integrity and eroding trust in educational outcomes.

**Decreased Face-to-face Communication:** Overuse of social media might result in fewer in-person encounters, which can impair interpersonal and communication skills. Many students' social development is impacted by their preference for online talks over in-person ones.

**Security and Privacy Concerns:** Cybercrimes or identity theft may result from the improper use of personal information. Sensitive information is accidentally shared online by many users. Sometimes students can be trapped in these frauds.

**Adverse Effects on Conduct:** Trends on social media can promote dangerous conduct.

Online validation and peer pressure have an impact on the decision-making process of students. **Reduced Ability to Read and Write:** Students may become less proficient in reading and writing and more dependent on short messages and emojis as a result of the growing usage of short-form information. Their comprehension skills may also be impacted by their tendency to scan posts. Short-form content consumption weakens reading and comprehension skills.

**Lack of Sound Sleep:** The use of social networks, especially before bedtime, can violate the sleep patterns of the students. The blue light emitted by the screens and the interaction with the stimulating content, negatively affect the quality and the duration of sleep. This leads to fatigue and cognitive manipulation.

**Time Management:** Students can fight against effective management of their time from the appeal of social networks. Too much time on the internet can interfere with study time and co-curricular activities, which leads to procrastination and reduced performance.

**Impact on Actions and Choices:** Social media challenges, trends, and viral content have the power to shape students' behaviour and occasionally push them towards harmful pursuits. Peer pressure and the need for online approval may influence their ability to make decisions.

### **Navigating the Impact of Social Media**

To effectively navigate the impact of social networks, students need to develop digital literacy and responsible behavior over the internet. Teachers, parents and schools play a significant role in managing students with the secure and careful use of social networks. Strategies such as the establishment of borders, the practice of digital detoxification and the promotion of open conversations help students to maintain healthy relationships with social networks. The Media Generation and Awareness Campaign Program provides students with the skills needed to critically evaluate and interpret online content. Social media contains a vast amount of data, therefore it's critical to weed out unnecessary and undesired information. Understanding the impact of social media on education to improve informed decision-making and teaching and learning practices is essential. Educators can use social media platforms to create more engaging learning experiences by promoting digital literacy and online behavior for students. Information about the potential risks of social networks, such as misinformation and cyberbullying, enables procedural measures to resolve these issues and contribute to a safer online environment. It is important to develop a responsible and wise use of social networks among students. Utilising social media effectively allows students to improve their educational journey while reducing potential drawbacks. Teachers and school leaders play an important role in guiding students to make the most of these platforms responsibly and effectively.

### **Conclusion**

Social network platforms have become an undeniable force in student life. It is essential to understand the negative impact, use the positive aspects and take a nautical strategy into a digital landscape. Students can use the possibilities of social networks to protect their well-being. Finally, the empowerment of students as informed and responsible digital citizens will allow them to maximize the benefits of social media while minimizing its potential drawbacks.
